

GEA Farm Technologies

Do the HyCheck . . .

. . . the Purity Law for milk

Check the water quality and cleaning capability of your dairy farm with the aid of the HyCheck Test Kit.

GEA Farm Technologies – The right choice.

Choose assured monitoring of our dairy cleaning system - **DO THE HyCheck NOW!**

Greater reliability - guaranteed quality.

The HyCheck system is GEA Farm Technologies completely redeveloped test technology for hygiene checks in milking plants. It sets standards in the monitoring and documentation of cleaning systems and analysis of water quality in milking plants. The test protocol identifies weak points quickly and reliably so that any discrepancies can be quickly responded to.

With HyCheck we can ensure **greater reliability** in the operation of the system – for perfect milk quality.

Cleanliness is top priority.

For you nothing is more important than a consistently high level of milk quality. It is for this reason that cleanliness and regular monitoring of your milking system are musts for lower microbe counts and good profit levels.

Choose HyCheck now, the safe and reliable monitoring system for your cleaning systems. Do not leave anything to chance. Deposits and discarded milk will then be a thing of the past.

As you can immediately evaluate the results of measurements, you are able to discuss any required actions on the spot with the specialist and can thus react to the current situation quickly and without losing any time.

Perfect, on-the-spot service.

The HyCheck system is a part of the range of services offered by your personal GEA Farm Technologies partner. He is a specialist for this process and carries out all tests on-site in a competent and cost-effective manner.

Advantages at a glance:

- ✓ quick to use.
- ✓ perfectly tailored to your system.
- ✓ reliable measurements.
- ✓ a regular check safeguards your milk revenue.
