GEA Farm Technologies

E-Brush / M-Brush

Improved cow comfort and welfare

...a brilliantly simple way to support the welfare of your cows

GEA Farm Equipment | [Royal De Boer](#)

GEA Farm Technologies - The right choice.

Features of both brushes:

- Long and short bristles maximise brushing efficiency
- Bristles made of wear-resistant nylon to improve the longevity of the brush
- Automatically reversed start-up direction maximises brush life

The M-Brush

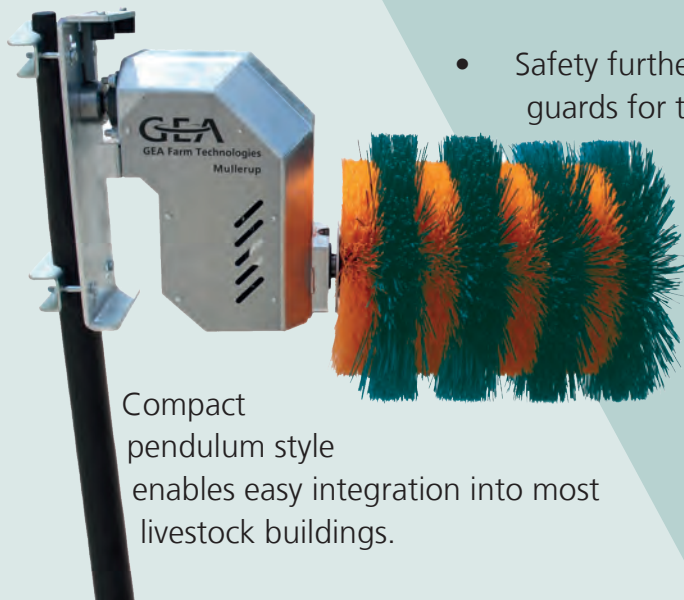

Rotating angled cow brush

Angled construction allows cows to groom their sides and flanks as well as their backs.

The E-Brush

Rotating horizontal cow brush

Compact pendulum style enables easy integration into most livestock buildings.

- The plastic shaft that holds the brush will break when overloaded to prevent damage to the brush and cow
- Safety further ensured through guards for the motor and gear box and insulation to all components
- Robust gear box, galvanised main frame and shock absorbers
- Optional clamps and fasteners enable clamping onto cubicle frames as well as wall-mounting.
